

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-20. (cancelled)

21. (new) A host client computer comprising:
a browser application that issues a request for content on a server, the request comprising a locator corresponding to the content;
a communications interface to a communications network for establishing a communications link between the host client computer and a slave client computer on the communications network; and
a shared view engine for receiving an identification of the slave client computer, intercepting the request issued by the browser, and providing, via the communications link to the slave client, a message comprising the locator.
22. (new) The host client computer of claim 20, wherein the server is a Web server, the content is a Web page, and the locator is a Universal Resource Locator (URL) corresponding to the Web page.
23. (new) The host client computer of claim 20, wherein the communications interface enables the host client computer to establish a plurality of communications links to a plurality of slave client computers on the communications network.
24. (new) The host client computer of claim 20, wherein the request comprises cookie data associated with the content.
25. (new) The host client computer of claim 24, wherein the message sent by the shared view engine comprises the cookie data associated with the content.
26. (new) The host client computer of claim 20, wherein the communications network is the Internet.

27. (new) The host client computer of claim 20, wherein the communications network is an intranet.

28. (new) The host client computer of claim 20, wherein the communications network is a wide area network.

29. (new) The host client computer of claim 20, wherein the communications network is a local area network.

30. (new) A computer-readable medium having stored thereon computer-executable instructions for performing a process comprising:

receiving by a shared view engine on a host client computer an identification of a slave client computer;

establishing a communications link between the host client computer and the slave client computer on a communications network;

issuing by a browser application on the host client computer a request for content from a server;

intercepting by the shared view engine the request;

sending by the shared view engine to the slave client a message identifying the content.

31. (new) The computer-readable medium of claim 30, wherein the server is a Web server and the content is a Web page.

32. (new) The computer-readable medium of claim 30, wherein the request comprises cookie data associated with the content.

33. (new) The computer-readable medium of claim 32, wherein the message sent by the shared view engine comprises the cookie data associated with the content.

34. (new) The computer-readable medium of claim 30, wherein the communications network is the Internet.

35. (new) The computer-readable medium of claim 30, wherein the communications network is an intranet.

36. (new) The computer-readable medium of claim 30, wherein the communications network is a local area network.

37. (new) The host client computer of claim 20, further comprising establish a plurality of communications links to a plurality of slave client computers on the communications network.

38. (new) The computer-readable medium of claim 30, wherein the communications network is a wide area network.

39. (new) The host client computer of claim 30, further comprising issuing by a browser application on the slave client computer a request for the content from the server.

40. (new) A system for generating shared views for browsing a web page, the system comprising:

a host client comprising:

a host web browser application that issues a host request for the web page on a web server, the host request comprising a uniform resource locator corresponding to the web page and cookie data associated with the web page;

a communications interface to a communications network for establishing a communications link between the host client computer and a slave client computer on the communications network; and

a host shared view engine for receiving an identification of the slave client computer, intercepting the host request issued by the browser, and providing, via the communications link to the slave client, a message comprising the uniform resource locator and the cookie data associated with the web page; and

the slave client computer comprising a slave shared view engine for receiving the message from the host client computer and issuing a slave request for the web page, the slave request comprising a uniform resource locator corresponding to the web page and cookie data associated with the web page.
